

Fast - Easy - Wireless

Specially developed software ensures the enabled SnapFoto offers a user friendly interface, and one that doesn't rely on any form of dedicated mobile app to communicate with and transfer images between mobile devices and the unit

A combined footprint of just 275x366mm the exact same as the Citizen CX-02 dye sub printer that makes up its chief component - ensures the compact SnapFoto's perfect for a broad range of retail spaces.

The SnapFoto broadcasts its own dedicated SSID signal, making for simple Wi-Fi connectivity and a familiar, secure and seamless experience for the end user

Hassle free print operation and one that delivers consistently excellent print results.
